Table 1: Definition of the health states used to derive disability weights (DWs) [19]

Inguinal hernia	Mild symptomatic inguinal, femora and abdominal hernia
Wound infection	Abscess and other bacterial skin disease
Infertility	Primary male infertility
Nausea &/or vomiting	Chronic abdominal pain due to congenital malformations of the abdominal wall-patient has some pain in the belly that causes nausea but does not interfere with daily activities.
Sepsis	Severe infection due to neonatal sepsis and other neonatal condition, acute episode, severe
Small bowel obstruction	Paralytic ileus and intestinal obstruction-abdominopelvic problem
Anemia	Moderate anemia due to gastritis and duodenitis

Box S1. Calculation of the total DALY-based complication burden score for each postoperative complication

$$\sum_{i=1}^n DALY_i = (DW_1 \times I_1 \times D_1) + \dots + (DW_n \times I_n \times D_n)$$

Where DW = disability weight and I = incident rate of complication
